

1. WAP to print sum of all elements

i/p:- `int[] a = {10, 20, 30, 40, 50};`
`10 + 20 + 30 + 40 + 50 = 150`
o/p:-150

2.WAP to print avg of array elements

`int[] a = {10, 20, 30, 40, 50};`
`10 + 20 + 30 + 40 + 50 = 150`
`Average = 150 / 5 = 30.0`
output:-30.0

3.WAP to print sum of even elements

`int[] a = {10, 20, 30, 40, 50};`
Even Elements = 10, 20, 30, 40, 50
`10 + 20 + 30 + 40 + 50 = 150`
Output:-150

4.WAP to print sum of odd elements

`int[] a = {11, 20, 33, 40, 55};`
Odd Elements = 11, 33, 55
`11 + 33 + 55 = 99`
Output:99

5.WAP to print sum of first 3 elements`

```
int[] a = {10, 20, 30, 40, 50};  
First 3 Elements = 10, 20, 30  
10 + 20 + 30 = 60  
Output:60
```

WAP to print sum of last 3 elements

```
int[] a = {10, 20, 30, 40, 50};  
Last 3 Elements = 30, 40, 50  
30 + 40 + 50 = 120  
Output: 120
```

6.WAP to print sum of Positive elements

```
int[] a = {-10, 20, -30, 40, 50};  
Positive Elements = 20, 40, 50  
20 + 40 + 50 = 110  
Output:110
```

7.WAP to Print Sum of Negative Elements

```
Input:int[] a = {-10, 20, -30, 40, -50};  
Negative Elements = -10, -30, -50  
-10 + (-30) + (-50) = -90  
Output:-90
```

9)WAP to Print Sum of Elements at Even Index

```
int[] a = {10, 20, 30, 40, 50};  
Even Index Elements = 10, 30, 50  
10 + 30 + 50 = 90
```

Output:90

10)WAP to Print Sum of Elements at Odd Index

Input: int[] a = {10, 20, 30, 40, 50};

Odd Index Elements = 20, 40

20 + 40 = 60

Output:60

11)WAP to print avg of even elements

int[] a = {12, 15, 18, 21, 24, 27};

Even Elements = 12, 18, 24

Sum = 12 + 18 + 24

= 54

Count = 3

Average = 54 / 3

= 18.0

Output:18.0

12)WAP to print avg of odd elements

int[] a = {12, 15, 18, 21, 24, 27};

Odd Elements = 15, 21, 27

Sum = 15 + 21 + 27

= 63

Count = 3

Average = 63 / 3

= 21.0

Output:21.013)WAP to check whether array element has middle element or not

int[]a={10,20,30};

o/p: middle ele is available

int[]arr={10,20,30,40};

o/p:- No Middle Ele

14)WAP to print middle element of an array

int[] a = {10, 20, 30, 40, 50};

Length = 5

Middle Index = 5 / 2 = 2

Middle Element = a[2] = 30

Output:30

15)WAP to print product of all elements

int[] a = {10, 20, 30, 40, 50};

10 × 20 × 30 × 40 × 50

= 200 × 30 × 40 × 50

= 6000 × 40 × 50

= 240000 × 50

= 12000000

Output:12000000

16)WAP to print product of even elements

17)WAP to print product of odd elements

18)WAP to iterate array element in reverse order

19)print even elements

20)print odd elements

21)WAP to print only +ve elements in an given array

int[] a = {-10, 20, -30, 40, 50, -60};

Positive Elements:

20

40

50

Output:20 40 50

22)WAP to print only -ve elements in an given array

int[] a = {-10, 20, -30, 40, 50, -60};

Negative Elements:

-10

-30

-60

Output:-10 -30 -60

23)WAP to print only buzz number in an given array

Buzz Number:

A number is called a Buzz Number if:

- **It is divisible by 7 OR**
- **It ends with 7**

int[] a = {14, 27, 35, 42, 50, 67, 89};

14 → Divisible by 7 ✓

27 → Ends with 7 ✓

35 → Divisible by 7 ✓

42 → Divisible by 7 ✓

50 → Not a Buzz Number ✗

67 → Ends with 7 ✓

89 → Not a Buzz Number ✗

Output:14 27 35 42 67

Sum of buzz number

Product of buzz number

24)WAP to print only non-zero numbers

int[] a = {0, 10, 20, 0, 30, 40, 0, 50};

Non-Zero Numbers:

10
20
30
40
50

Output:10 20 30 40 50

25)WAP to print if it is divisible by 3

26)WAP to print if it is divisible by 4

27)WAP to print sum of elements if it is divisible by 3

28)WAP to print sum of elements if it is divisible by 4

29)WAP to print product of elements if it is divisible by 3

30)WAP to print product of elements if it is divisible by 4

31)WAP to print only if it is single digit

int[] a = {5, 12, 7, 145, 99, 3, 456};

Single Digit Numbers:

5 → Single Digit ✓

12 → Not Single Digit ✗

7 → Single Digit ✓

145 → Not Single Digit ✗

99 → Not Single Digit ✗

3 → Single Digit ✓

456 → Not Single Digit ✗

Output:5 7 3

32)WAP to print only if it is two digit

int[] a = {5, 12, 7, 145, 99, 3, 456};

Two Digit Numbers:

5 → Not Two Digit ✗
12 → Two Digit ✓
7 → Not Two Digit ✗
145 → Not Two Digit ✗
99 → Two Digit ✓
3 → Not Two Digit ✗
456 → Not Two Digit ✗

Output:12 99

33)WAP to print only if it is three digit

WAP to Print Only Three Digit Numbers

Input: int[] a = {5, 12, 7, 145, 99, 3, 456};

Three Digit Numbers:

5 → Not Three Digit ✗
12 → Not Three Digit ✗
7 → Not Three Digit ✗
145 → Three Digit ✓
99 → Not Three Digit ✗
3 → Not Three Digit ✗
456 → Three Digit ✓

Output:145 456

34)WAP to count even digit in an given array

35)WAP to count odd digit in an given array

Day:-2

1. WAP to create char[] and store character from user and print it on console
2. WAP to print only vowels from char[]

```
char[] ch = {'A', 'b', 'e', '#', 'l', 'm', 'o', 'P', 'u', '7'};
```

Vowels:

A → Vowel ✓

b → Not Vowel ✗

e → Vowel ✓

→ Not Vowel ✗

l → Vowel ✓

m → Not Vowel ✗

o → Vowel ✓

P → Not Vowel ✗

u → Vowel ✓

7 → Not Vowel ✗

Output: A e l o u

- 3.WAP to print only consonants from char[]

```
char[] ch = {'A', 'b', 'e', '#', 'l', 'm', 'o', 'P', 'u', '7'};
```

Consonants:

b → Consonant ✓

m → Consonant ✓

P → Consonant ✓

Output:b m P

37)WAP to print only Uppercase character from char[]

char[] ch = {'A', 'b', 'e', '#', 'l', 'm', 'o', 'P', 'u', '7'};

Uppercase Characters:

A → Uppercase ✓

l → Uppercase ✓

P → Uppercase ✓

Output:A l P

4.WAP to print only lowercase character from char[]

char[] ch = {'A', 'b', 'e', '#', 'l', 'm', 'o', 'P', 'u', '7'};

Lowercase Characters:

b → Lowercase ✓

e → Lowercase ✓

m → Lowercase ✓

o → Lowercase ✓

u → Lowercase ✓

Output:b e m o u

5.WAP to print only Special character from char[]

A special character is any character that is not an alphabet (A-Z, a-z) and not a digit (0-9).

```
char[] ch = {'A', 'b', 'e', '#', 'l', '@', 'm', 'o', 'P', '$', 'u', '7'};
```

Special Characters:

→ Special Character ✓

@ → Special Character ✓

\$ → Special Character ✓

Output:# @ \$

6.WAP to print only alphabet character from char[]

Any character between A to Z or a to z is called an alphabet character.

```
char[] ch = {'A', 'b', 'e', '#', 'l', '@', 'm', 'o', 'P', '$', 'u', '7'};
```

Alphabet Characters:

A ✓

b ✓

e ✓

l ✓

m ✓

o ✓

P ✓

u ✓

Output:A b e l m o P u

7.WAP to print only digits from char[]

char[] ch = {'A', '7', '@', 'b', '#', '9', '\$', '3', 'M'};

A → Not Digit ✗

7 → Digit ✓

@ → Not Digit ✗

b → Not Digit ✗

→ Not Digit ✗

9 → Digit ✓

\$ → Not Digit ✗

3 → Digit ✓

M → Not Digit ✗

Output:7 9 3

8.print characters in reverse order from char[]

9.WAP to print even index character from char[]

char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};

Index : 0 1 2 3 4 5 6 7 8

Value : A b @ E m # u P 7

Even Indices = 0, 2, 4, 6, 8

Characters = A @ m u 7

Output:A @ m u 7

10.WAP to print odd index character from char[]

char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};

Index : 0 1 2 3 4 5 6 7 8

Value : A b @ E m # u P 7

Odd Indices = 1, 3, 5, 7

Characters = b E # P

Output:b E # P

11.WAP to print vowel character index from char[]

char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};

A → Vowel → Index 0

E → Vowel → Index 3

u → Vowel → Index 6

Output:0 3 6

12.WAP to print consonants character index from char[]

```
char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};
```

b → Consonant → Index 1

m → Consonant → Index 4

P → Consonant → Index 7

Output:1 4 7

13.WAP to print uppercase character index from char[]

```
char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};
```

A → Uppercase → Index 0

E → Uppercase → Index 3

P → Uppercase → Index 7

Output:0 3 7

14.WAP to print lowercase character index from char[]

```
char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};
```

b → Lowercase → Index 1

m → Lowercase → Index 4

u → Lowercase → Index 6

Output:1 4 6

15.WAP to print special character index from char[]

```
char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};
```

@ → Special Character → Index 2

→ Special Character → Index 5

Output:2 5

16.WAP to print alphabetical character index from char[]

char[] ch = {'A', 'b', '@', 'E', 'm', '#', 'u', 'P', '7'};

A → Alphabet → Index 0

b → Alphabet → Index 1

E → Alphabet → Index 3

m → Alphabet → Index 4

u → Alphabet → Index 6

P → Alphabet → Index 7

Output:0 1 3 4 6 7

17.WAP to print first 3 character from char[]

18.WAP to print last 3 character from char[]

19.WAP to print middle two character from an even length char[]array

20.WAP to print sum of All character ASCII value

char[] ch = {'J', 'a', 'v', 'a'};

J = 74

a = 97

v = 118

a = 97

$$74 + 97 + 118 + 97 = 386$$

Output:386

21.WAP to print sum of even ASCII value characters

char[] ch = {'B', 'c', 'D', 'e'};

B = 66 (Even)

c = 99 (Odd)

D = 68 (Even)

e = 101 (Odd)

$$66 + 68 = 134$$

Output:134

22.WAP to print sum of odd ASCII value characters

char[] ch = {'A', 'b', 'C', 'd', 'E'};

A = 65 (Odd)

b = 98 (Even)

C = 67 (Odd)

d = 100 (Even)

E = 69 (Odd)

$$65 + 67 + 69 = 201$$

Output:201

23.WAP to print Average of ASCII value

char[] ch = {'M', 'N', 'O'};

M = 77

N = 78

O = 79

Sum = 77 + 78 + 79

= 234

Average = 234 / 3

= 78.0

Output:78.0

24.WAP to print product of Ascii value character

char[] ch = {'A', 'B', 'C'};

Calculation:

A = 65

B = 66

C = 67

65 × 66 × 67

= 4290 × 67

= 287430

Output:287430

25.WAP to print product of even Ascii value character

char[] ch = {'A', 'C', 'E'};

A = 65

C = 67

E = 69

65 × 67 × 69

= 4355 × 69

= 300495

Output:300495

26.WAP to print product of odd ASCII value character

27.WAP to print first vowel in char[]

char[] ch = {'#', 'T', 'm', 'E', '7', 'a'};

→ Not Vowel ✗

T → Not Vowel ✗

m → Not Vowel ✗

E → Vowel ✓

Output:E

28.WAP to print first consonant in char[]

char[] ch = {'@', '3', 'A', 'k', 'e', 'M'};

@ → Not Consonant ✗

3 → Not Consonant ✗

A → Vowel ✗

k → Consonant ✓

Output:k

29.WAP to print first uppercase in char[]

char[] ch = {'#', '7', 'm', 'P', 'a'};

→ Not Uppercase ✗

7 → Not Uppercase ✗

m → Not Uppercase ✗

P → Uppercase ✓

Output:P

30.WAP to print first lowercase in char[]

char[] ch = {'@', 'A', '7', 'n', 'B'};

@ → Not Lowercase ✗

A → Not Lowercase ✗

7 → Not Lowercase ✗

n → Lowercase ✓

Output:n

31.WAP to print first special character in char[]

char[] ch = {'A', '7', '\$', 'm', '#'};

A → Not Special Character ✗

7 → Not Special Character ✗

\$ → Special Character ✓

Output:\$

32.WAP to print first digit character in char[]

char[] ch = {'A', '#', 'm', '5', '9'};

A → Not Digit ✗

→ Not Digit ✗

m → Not Digit ✗

5 → Digit ✓

Output:5

33.WAP to print last vowel from char[]

char[] ch = {'A', 'k', 'e', 'M', 'o', '#'};

Vowels = A, e, o

Last Vowel = o

Output:o

34.WAP to print last consonant from char[]

char[] ch = {'A', 'k', 'e', 'M', 'o', 't'};

Consonants = k, M, t

Last Consonant = t

Output:t

35.WAP to print last digit from char[]

char[] ch = {'A', '4', '#', '8', 'm', '2'};

Digits = 4, 8, 2

Last Digit = 2

Output:2

36.WAP to print last uppercase from char[]

char[] ch = {'A', 'b', 'M', '7', 'P', 'e'};

Uppercase Characters = A, M, P

Last Uppercase = P

Output:P

37.WAP to print last lowercase from char[]

char[] ch = {'A', 'b', 'M', 'n', 'P', 'z'};

Lowercase Characters = b, n, z

Last Lowercase = z

Output:z

38.WAP to print last special character from char[]

char[] ch = {'@', 'A', '#', '7', '\$', 'm'};

Special Characters = @, #, \$

Last Special Character = \$

Output:\$

39)WAP to print data which are divisible by 3 or 4 from integer array

40)WAP to print data which are divisible by both 3&4 from integer array

41)WAP to sum of value which are divisible by 3 or 4 from integer array

42)WAP to product of value which are divisible by both 3&4 from integer array

43)Store every element binary value
